

vec SPRINT

EV Wall Mounted Charger

Data sheet

evec
for everyone

3 YEAR
PARTS &
LABOUR
GUARANTEE

Get your business EV-ready in record time with the **vecSPRINT** wall charger

When space is tight but charging demand is high, vecSPRINT delivers. With dual sockets in a single wall-mounted unit, you get two chargers in the footprint of one – no groundworks, no hassle. It's the perfect fit for workplaces, apartments, or commercial spaces looking to add EV charging without the disruption of digging or installing pedestals.

Compatible with any EV and available with charging speeds up to 22kW, vecSPRINT keeps things simple, efficient, and future-proof. Installation is straightforward thanks to the included wall bracket, and like the rest of our range, it works seamlessly with plug & play or pay-to-charge options* via the evec app.

*pay-to-charge is powered by Monta.

Product features

Control via plug & play, mobile app, or our backend partners

RFID included as standard

Available up to 7.4kW or 22kW charging output(s)

Conforms with PAS 1899 accessible charging standard**

Over-the-air firmware / software updates

LCD screen

Robust design IP55 / IK10 rated

Built-in over current and 6mA DC leakage protection

Built-in PEN protection

OCPP 1.6J SON compliance

Integrated light strip for visibility

4G / Wi-Fi / Ethernet connectivity

No need for digging or major groundwork for installation

Optional Payter payment terminal available

Supports dynamic load balancing

3-year warranty as standard with option to extend

Accessible charging

Conforms with PAS 1899 accessible charging standard when installed at a specific height, LCD screen with easy instructions.

OZEV approved

Secure a grant of up to £14,000 (£350 per socket) for up to 40 charge points with the OZEV workplace charging scheme.

Dynamic Load Balancing

Optimise your charger power, the dynamic way. Remove the risk of overloading your electricity feed and allocate power to deliver charging based on real time demand.

Easy to use

Control your charger easily via our mobile app, plug & play, vecPAY or via your preferred backend partner

Safe

Our chargers include PEN protection, security breach notifications, and over-the-air updates, ensuring comprehensive security and convenience.

Warranty

Rest assured with a 3-year warranty covering parts and labour. Extend coverage with our optional Protect my Products plan.

Optional add-on

Optimise your charging capacity, the **dynamic** way

The evec Dynamic Load Balancing (DLB) kit is a charger load-sharing add-on that automatically optimises the distribution of power across your chargers. Delivering power to the right charger, at the right time, automatically. The DLB kit takes manual load-sharing out of the equation and ensures that available power is shared to meet real demand, without ever overloading your network.

Ideal for:

- EV charging capacity management
- Limited power supply applications
- EV fleet management
- Private residential developments
- Car parks

Which chargers is this available for?

The DLB kit is available across all our AC models, including home chargers, commercial wall-mounted chargers, and all pedestal chargers.

Please note: All chargers within the same DLB setup must be the same model. Mixing different charger models within a single DLB configuration is not currently supported.

What's included?

- ✓ CT Clamps 400A/40mA
- ✓ Connector Seats with 120 ohms resistance for first and last charger
- ✓ Wire Connectors for chargers in between the first and last charger

Dynamic Load Balancing example:

Emily manages a hotel car park and has 4 evec 22kW pedestals installed. The site has 80A of total power available for EV charging. Our dynamic load balancing system distributes the power efficiently, so multiple cars can charge without overloading the system.

1. Vehicle A arrives to charge

Full power is available, so it gets a full charge.

2. Vehicle B arrives to charge

Power is now shared between A and B, so both receive equal charge.

3. Vehicle C arrives to charge

The system adjusts, splitting power evenly between A, B, and C.

4. Vehicle D arrives to charge

Now, all four cars share the available power.

5. Vehicle A reaches full charge

It stops charging, and the system redistributes power among the remaining vehicles.

Key things to know:

- A full charge session will be limited to either the cable's max or the chargepoint's max—whichever is lower
- Remaining power is shared equally among active chargers, with a minimum of 6A each
- If power gets too high, some cars charging at full power will be reduced, so everything balances out

Optional add-on

Simple, contactless EV charging payments for businesses. That's **vecPAY**.

Stay compliant. Keep it simple. Get charging.

vecPAY is your all-in-one solution for contactless EV charging payments—designed for businesses that need a simple, cost-effective, and scalable system. Whether you operate a retail park, hotel, car park, or commercial estate, vecPAY provides a seamless charging experience that meets the new regulations, attracts customers, and simplifies your operations.

Why do you need vecPAY?

With the Government's regulations in place from November 2024, all public commercial EV chargers must support contactless payments. With vecPAY, customers can tap and go using their card, phone, or smartwatch—no apps, no hassle.

Product features

✓ Easy contactless

Plug in, tap, and go: No apps, no hassle – just tap with your preferred contactless payment method.

✓ Manage multiple charge points

One vecPAY terminal can control up to 10 charge points at once*, cutting down on hardware and costs while maintaining a clean, efficient setup.

✓ Customisable and scalable

Choose between wall-mounted or pedestal options to fit any site, from multi-storey car parks to forecourts.

✓ Full control via Monta

Remotely set pricing, manage payments, track usage, and generate reports, all from one place.**

*Available to connect to more chargers on request. **Additional charges may apply.

vecPAY Floor Mounted

The floor-mounted version of vecPAY is a sleek, free-standing pedestal. With built-in lighting for added safety, charging is simple and secure, even in low-light conditions.

vecPAY Wall Mounted

The wall-mounted version is ideal for locations where you've already got existing walls like multi-storey car parks, or areas with limited floor space. Since it attaches directly to the wall, there's no need for digging or major groundwork, which makes installation quicker, less disruptive, and more cost-effective.
